Scientific and Technical Information Center

Requester's Full Name: St. John Courtenay Examiner# : _____ Date: 4/11/02
Art Unit: 2151 Phone Number: 308-5217 Serial Number: 091008241
Mail Box and Bldg/Room Location: 5D42 Results Format Preferred (circle): Paper Disk E-mail

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Subject: Need litigation search ASAP for Reissue Ser. No. 09/008,241, U.S. Patent 5,485,617

Dear Sir or Madam,

I need a litigation search ASAP for Reissue application Ser. No. 09/008,241 (reissue of U.S. Patent 5,485,617).

If you determine that patent 5,485,617 is currently in litigation, please let me know ASAP.

Thanks,
St. John Courtenay III

- "Ole 2.0 Part II: Implementing a Simple Windows Object Using Either C or C ++", by Brockschmidt, Kraig, Microsoft Systems Journal Sep. 1993 p. 49.

STG - (A) United States patent

AB - A method and system for dynamically generating object connections is provided. In a preferred embodiment, a connection can be generated between a source object and a sink object using a connection point object. A source object has connection point objects where each connection point object corresponds to a particular interface. A sink object implements one or more notification interfaces for connecting to a source object. A connection point object of a source object can connect to multiple notification interfaces, which belong to one or more sink objects. A connection point object keeps track of pointers to the notification interfaces to which it has been connected. In order to generate a connection, a sink object requests from a source object a connection point object corresponding to a particular interface. The source object determines whether it supports such a connection point object, and if so returns a pointer to the connection point interface of the determined connection point object. The sink object then requests to be connected to the connection point object using the returned connection point interface pointer and passes a reference to a notification interface of the sink object corresponding to the particular interface. The connection point object then stores the reference to the notification interface of the sink object, creating a connection between the sink object and the source object. At some later time, the source object can utilize the connection to notify the sink object through the connected notification interfaces.
